

## **MATERIAL HANDLING EQUIPMENT + FÖRDEX.PLUS LOOP CONVEYORS**

Material handling can place a lot of pressure on conveying equipment, thus must be selected carefully and precisely. Conveyors are used in thousands of industrial applications for conveying and elevating variety of bulk materials. It is important to select correct type and size of conveying equipment to handle the transported material in a correct way.

Loop Conveyors are most versatile and simplest material handling systems. They are consisting of an endless loop belt or chain operating on two or more pulleys or sprockets.

FÖRDEX.PLUS Loop Conveyors are the most cost-effective solution to move materials from one location to another horizontal or up inclinations.

FRX+B Belt Conveyors are ideal for handling materials of various sizes and shapes with increased capacity and low power consumption. Flat Type Belt is used to convey light weight and small particles while V Troughed and U Troughed Belt is used to convey bigger parts.

Bulk materials discharged from screening and sludge dewatering equipment, can easily be conveyed using Belt Conveyors.
